

BUI HONG PHUC (Ethan)

AI Engineer

Ho Chi Minh City, Vietnam | 0379 517 012 | duyphuc2425@gmail.com | github.com/Phucgiacat

PROFESSIONAL SUMMARY

Becoming a data professional with strong SQL and Python skills and a record of turning raw, unstructured data - including financial and identity documents - into measurable business outcomes. Comfortable across the full analytics workflow, from data cleaning and feature engineering to building, validating, and presenting models to non-technical stakeholders, as well as deploying production AI systems and building the software (frontend/backend) around them. Self-studying credit-risk fundamentals to build a long-term career in data science within the financial industry.

EXPERIENCE

AI Engineer - CONG TY TNHH DAU TU & KINH DOANH TRUNG VIET (Part-time)

Oct 2025 - Jun 2026

- Deployed AI solutions into production to support internal business operations, from data ingestion to automated response generation.
- Built an automated AI video-generation pipeline, cutting content-production time by 50%.
- Designed and implemented end-to-end data-processing workflows to structure raw business data for downstream AI applications.
- Built a chatbot website (frontend + backend) integrated with LLM APIs to handle customer inquiries in real time.

Tech: Python, React, FastAPI, LLM APIs

Data Science Research Assistant - NLP & AI Lab, University of Science

Feb 2025 - Present

- Built an automated OCR pipeline that turns financial documents into structured, query-ready data, cutting manual processing time by 60% and improving accuracy by 20%.
- Created data-validation and annotation tooling that lifted team throughput by 30% while keeping training data clean and representative.
- Mentored 3 juniors, owned the team's Git codebase, and introduced a code-review workflow that cut integration bugs by 15%.

AI Engineer - Wooda (Full-time)

Jun 2024 - Apr 2025

- Built and deployed a customer-facing conversational AI system, automating support interactions and reducing average response time by 40%.
- Integrated support agents into the platform to handle multi-step user requests end-to-end, improving first-contact resolution rate by 25%.
- Developed and maintained custom AI skills to extend agent capabilities for domain-specific tasks such as order tracking, FAQ handling, and issue escalation.
- Built data-processing pipelines to structure enterprise data, ensuring the AI system delivered consistent, reliable responses at scale.

Tech: Python, LangChain, LLM APIs, SQL

Technology Development Intern - CMT Global

Mar 2024 - May 2024

- Built large-scale data-collection pipelines that aggregated market data into a query-ready SQL database for BI and reporting.
- Resolved critical production issues to maintain 99% system stability for the analytics team.
- Ran functional and manual testing for product verification, reducing post-release defects by 25%.

SELECTED PROJECTS

Home Credit - Credit Risk Model Stability - Kaggle Competition

Jun 2026

- Built and evaluated gradient-boosting models to predict client repayment, holding performance stable as data distributions shifted over time.

- Ran EDA and feature engineering on large, imbalanced financial data to surface meaningful credit-risk signals.

Tech: Python, pandas, scikit-learn, LightGBM, XGBoost

Enterprise Database & Reporting Automation - **Freelance**

May 2026

- Built an AI agent that automates SQL querying and financial reporting, cutting manual data-retrieval time by 40%.
- Integrated it with internal dashboards and led 2 interns to define business use cases with cross-functional stakeholders.

Tech: Python, SQL, LangChain, LLM APIs

KYC Document Understanding for Fintech - **CoverGO Hackathon**

Oct 2025 - Nov 2025

- Built a system that extracts key fields from Vietnamese financial and identity documents, simulating a fintech KYC flow.
- Tuned models to parse complex table structures, reaching 92% F1 on a held-out test set.

Tech: Python, PyTorch, OCR/VLM, Gradio

EDUCATION

Bachelor of Information Technology - **University of Science, Ho Chi Minh City**

Sep 2022 - Aug 2026

- GPA: 3.2/4.0 (Major GPA: 3.6/4.0 in AI/ML courses)
- Coursework: Probability & Statistics, Machine Learning, Data Mining, Database Systems, Deep Learning

CERTIFICATIONS & ACHIEVEMENTS

- 2nd Prize - Bosch Innovation Day 2025; 3rd Prize - Provincial Science Fair
- Publication: Paper accepted at VCL 2025 (Vietnamese Conference on Linguistics)

TECHNICAL SKILLS

Programming & Data: Python (pandas, NumPy), SQL.

Machine Learning: scikit-learn, LightGBM, XGBoost, PyTorch; feature engineering, model validation & evaluation.

AI Systems & Software: Conversational AI / agent integration, LangChain, LLM APIs, chatbot development; Frontend (React) & Backend (FastAPI) development.

Analytics & BI: EDA, statistical modeling, Matplotlib, dashboards & business reporting (Power BI).

Tools: Git, Docker, REST APIs.

Domain: Credit-risk fundamentals, KYC / financial-document processing.
